

SEWERSAVERS

TRENCHLESS SOLUTIONS

Coating and Application Technology Designed to Renew and Protect

Sewer Savers® is a trained and certified applicator for several epoxy manufacturers. We have the experience and expertise to provide effective and efficient restoration solutions for municipal and industrial pump stations. Utilizing the latest in coating technology, equipment and application techniques, we can rebuild and restore severely damaged wastewater pump stations and collection systems.

Our coatings are versatile, proven and offer superior protection from the most aggressive wastewater environments. This high-performance protective lining and application technology improves the structural integrity and strength of deteriorating wastewater systems.

Advantage to Protective Coatings

- Improves structural integrity and strength
- Prevents infiltration/exfiltration leakage
- Resistant to bacterial and chemical attack
- Resistant to corrosion and abrasion
- Applied coating extends the service life of structure
- Economical solution, replacement costs are eliminated
- Material is eco-friendly, solvent free

High-performance coatings deliver quality results and provide a long-term, cost-effective solution for deteriorating municipal and industrial wastewater systems.

Pump and Lift Station Rehabilitation

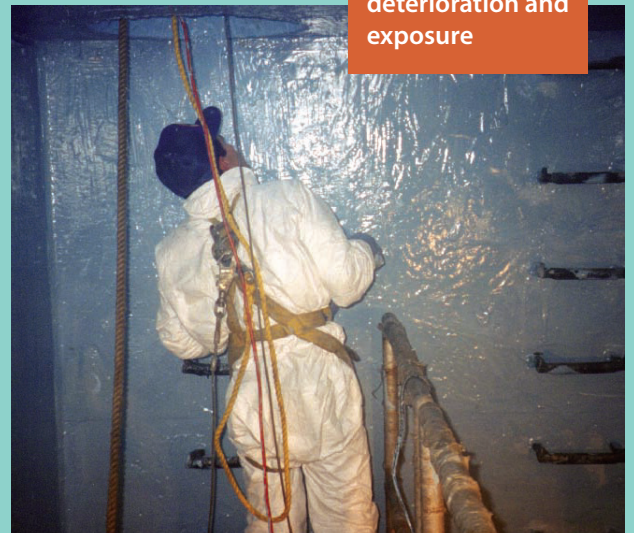

Most surfaces are prepared by high-pressure cleaning

The corrosive and abrasive environment of municipal pump stations present a formidable challenge to aging wastewater infrastructures.

Coating choice and thickness is determined by extent of deterioration and exposure
